Dear Hiring Manager,

RE: Data Analyst and Software Engineering Intern

As a United States Marine Corps Veteran and dual-degree graduate with an intense interest in problem-solving and deriving data-based solutions, I bring to data analysis and software engineering a unique combination of discipline, flexibility, and technical aptitude. My journey has never been typical. It began with a short yet formative internship in IT within the sphere of the criminal justice system, during which I realized that technology could ease processes and reveal implementable insights. I have since then been building on-the-job skill and knowledge bases so that I can push towards adding genuine value to any mission-driven team in the dynamic, fast-paced, and analytical environments.

Degree programs aside, I have built my portfolio of 70+ freelance projects in data analysis, full-stack development, and automation using Python, SQL, MySQL, and React. Some highlights would include the design of Tableau dashboards for large-scale use, performing regression analyses on marketing data using Python, and the engineering of normalized databases with well-tuned stored procedures. These experiences, in addition to over 230 industry-recognized credentials from trusted establishments such as IBM, Google, Meta, Microsoft, and Salesforce, are an evidence of my passion for continuous improvement and learning by doing.

Academically, I hold two Bachelor of Science degrees from Park University: one in Computer Science and Information Science and another in Criminal Justice Administration. This blend of disciplines lends itself to supporting my analytical thinking alongside system-thinking, the understanding of structure and human behavior, which constitute core elements for a data analyst and software engineer. During my studies, I maintained a high GPA, and I took the initiative with self-directed learning and project-based application.

What really gets me excited about this work is problem-solving with others, reporting and communicating technical findings, and using data to pursue larger objectives. I enjoy working in an environment where knowledge sharing and respect for one another and clear communication drive innovation. My military service instilled in me an unyielding responsibility, meticulousness, and leadership.

Thank you for considering my application. I would welcome the opportunity to further discuss how I can contribute to your team and support your mission. I'm excited to learn, grow, and deliver impactful results.

Sincerely,

Willie Conway
